your product“

RFID Solution

Radio Frequency Identification System (RFID) is said to be the key technology for the automation of business processes in industry, trade and logistics. This technology allows us to transmit product and process information via radio signals. The fashion industry is one of the pioneers. To measure the input and output of the goods more efficiently, more and more traders and manufacturers provide their articles with these intelligent chips.

RFID Hang Tag

RFID Hang Tags make it possible to identify one or more textiles at the same time.

The electrical characteristics (especially the resonance frequency) are particularly geared towards the textile logistic chain.

RFID self adhesive paper labels

Safety that sticks

Self adhesive paper labels can be applied everywhere the wireless transport technology is used. From logistics up to branch identification, from pallet marking to cardboard labels up to single product labelling. Whatever you need: RFID self adhesive labels are the right choice.

Material: several paper- and cardboard grades
Format: customized
Presentation: single label or endless label
Print: up to 4 colours

Material: Polyester-Satin, Nylon-Taffeta
Format: customized
Presentation: single label or endless label
Print: with customized data (barcode, price, article-no., ...) or customer owned print with a thermal transfer printer
Application: textile safety

Material: Paper, self adhesive
Format: customized
Presentation: on rolls
Print: plain or preprinted
Adhesive: according to requirement
Application: marking of products in goods distribution
